

ST ANDREWS COLLEGE

CENTENNIAL CHAPEL

RL System: Ultratherm Xtreme (Derbigum)
Location: Christchurch
Project Date: 2017

Architect: Architectus
Installer: SWP Commercial

PROJECT DESCRIPTION

The original, historic chapel at St. Andrews College in Christchurch suffered significant damage in the Christchurch Earthquake in 2011. A new school chapel, designed by Architectus has now been constructed on the site of the original building. Skilfully integrating several elements from the original building, the award winning new chapel is perfectly conceived and constructed and will serve the St. Andrews school community for many years to come.

The roof of the chapel is highly visible and much thought was given to the design, specification and installation of the RoofLogic system. The roof needed to be thermally efficient and highly durable and also needed to achieve an aesthetic appropriate to the design.
