

THE HEARING HOUSE

RL System: Ultratherm Xtreme (Derbigum)
Project Size: 490m²
Location: Auckland
Project Date: 2017

Architect: Bossley Architects
Contractor: Amstar Construction
Installer: SWP Commercial

PROJECT DESCRIPTION

The Stichbury Bidwill Centre is a state-of-the-art 1000sqm facility featuring therapy rooms, audiology booths, a community meeting room, a family room and a sensory integration room. Construction began in July 2016 and was completed in December 2017.

The Hearing House organisation teaches deaf and hearing impaired children to listen and speak. The lower level contains flexible meeting rooms and staff offices, while therapy rooms and audiology suites are located on the upper level. The new building is linked to the existing house by a glazed gallery which forms the new entry. A new pre-school has been built in the adjacent garden. The extension provides facilities in keeping with the beneficial value of their programme.
