

CITY FITNESS

RL System: RL Recover Ultratherm Xtreme
Project Size: 1,400m²
Location: Lower Hutt
Project Date: 2021

Installer: SWP Commercial

PROJECT DESCRIPTION

The warehouse building that accommodates City Fitness in Lower Hutt underwent a recovery process with the installation of an Ultratherm Xtreme FiberTite Recover roof.

The City Fitness building in Lower Hutt, Wellington, originally had a DD400 metal roof profile. It was a common practice to install this profile at a roof pitch lower than the currently accepted 3 degrees. The pitch below 3 degrees poses a risk, as any foot traffic on the roof leads to dish formation in the roof pan and damage to the sheet joints between the purlins, resulting in leaks across the roof.

SPECIFIED ROOFLOGIC SYSTEM

RoofLogic's Recover Ultratherm Xtreme system:-

- Ultratherm Xtreme recover with Fibertite
- RL Vapour Control Layer
- RL PIR Insulation (40mm)
- PIR Fillets
- RL Roof Board HDP
- RL Roof Board LW
